FLUVAL

Fluval External Filter 106

Designed for both saltwater and freshwater aquariums up to 22 Gallons / 100 Litres. The Fluval 106 external filters comes complete with all media which includes 2 x foams which traps debris and particles, 1 x carbon bag to help eliminate discoloration and odors (70g) and 1 x Fluval Biomax (200g) which invites friendly beneficial bacteria to grow. The 106 has many advanced features such as Aqua Stop, Instant Primer Function, Lift Lock Clamps and Multi Chamber Filtration allowing biological chemical and mechanical media to be used. The Fluval 106 runs on an economical 10 watts and has a flow rate turnover of 125 Gallons / 550 Litres per hour. Please ensure your fish tank / aquarium has cut outs on the hood or rim to allow intake and outlet pipes and that the 106 external filter is no more than 1.4m below the water surface. Fluval 06 series filters are all compatible with the Fluval spray bar.

Fluval External Filter 206

Designed for both saltwater and freshwater aquariums up to 44 Gallons / 200 Litres. The Fluval 206 external filters comes complete with all media which includes 2 x foams which traps debris and particles, 2 x carbon bag to help eliminate discoloration and odors (70g) and 1 x Fluval Biomax (200g) which invites friendly beneficial bacteria to grow. The 206 has many advanced features such as Aqua Stop, Instant Primer Function, Lift Lock Clamps and Multi Chamber Filtration allowing biological chemical and mechanical media to be used. The Fluval 206 runs on an economical 10 watts and has a flow rate turnover of 173 Gallons / 780 Litres per hour. Please ensure your fish tank / aquarium has cut outs on the hood or rim to allow intake and outlet pipes. Fluval 06 series filters are all compatible with the Fluval spray bar.

Fluval External Filter 306

Designed for both saltwater and freshwater aquariums up to 66 Gallons / 300 Litres. The Fluval 306 external filters comes complete with all media which includes 4 x foams which traps debris and particles, 2 x carbon bag to help eliminate discoloration and odors (70g) and 2 x Fluval Biomax (200g) which invites friendly beneficial bacteria to grow. The 306 has many advanced features such as Aqua Stop, Instant Primer Function, Lift Lock Clamps and Multi Chamber Filtration allowing biological chemical and mechanical media to be used. The Fluval 306 runs on an economical 15 watts and has a flow rate turnover of 255 Gallons / 1150 Litres per hour. Please ensure your fish tank / aquarium has cut outs on the hood or rim to allow intake and outlet pipes. Fluval 06 series filters are all compatible with the Fluval spray bar.

Fluval External Filter 406

Designed for both saltwater and freshwater aquariums up to 88 Gallons / 400 Litres. The Fluval 406 external filters comes complete with all media which includes 4 x foams which traps debris and particles, 2 x carbon bag to help eliminate discoloration and odors (70g) and 2 x Fluval Biomax (200g) which invites friendly beneficial bacteria to grow. The 406 has many advanced features such as Aqua Stop, Instant Primer Function, Lift Lock Clamps and Multi Chamber Filtration allowing biological chemical and mechanical media to be used. The Fluval 406 runs on an economical 15 watts and has a flow rate turnover of 345 Gallons / 1550 Litres per hour. Please ensure your fish tank / aquarium has cut outs on the hood or rim to allow intake and outlet pipes. Fluval 06 series filters are all compatible with the Fluval spray bar.

Meet the New Generation of Fluval External!

Check out the new Fluval '06 Canister Filter, the latest update to the world's favourite external filter!

The first change you notice is the aesthetic – a sporty looking black, red and white livery now adorns the filter casing. The real changes though are not immediately obvious until you delve a little deeper.

Easy to Start

A completely re-engineered priming mechanism makes the Fluval '06 child's play to get started. Just a few pumps of the new, strengthened priming handle and you're off and running.

15% More Power

The new filters are more powerful than their predecessors **without** increasing power usage, thanks to some clever mechanical changes which allow the filter to work more efficiently. Each model now moves up to 15% more water than its predecessor for better circulation and cleaner, healthier water.

Silence is golden

The Fluval has always been a quiet filter, but now it's practically silent thanks to a completely re-engineered impeller and impeller cover. At the contact points between the impeller and cover sit tiny ceramic rings which are virtually friction free, reducing vibration and noise to a bare minimum for almost silent running.

Easy To Maintain

The patented Aqua-Stop system effortlessly stops water flow with no mess or leaks and the new, strengthened lift-lock handles allow easy access inside the filter. **Quick-change mechanical foam media** is easy to remove and the new **Bio Foam** media supplied (206, 306 and 406 models only) creates additional space for beneficial bacteria to breed.

Key Benefits:

- Advanced Motor Technology - Maintains strong flow between scheduled maintenances.
- Multi Stage Filtration - Unique filter design separates each filtration stage for maximum versatility and minimal maintenance.
- Maximum Media Versatility - Pretty much any filter media you choose can be easily used in the 06 range.
- Aquastop - Stops water flow without disconnecting hoses, eliminating leaks and messes.
- Lift Lock Clamps - Quickly secures motor in place.
- Quick-Change Mechanical Media - Foam cartridge is readily accessible for fast removal.
- Instant Prime - Re-engineered for simple and quick start-ups.
- 3 Year Warranty - For peace of mind.
